EDUCATION

Masinde Muliro University of Science and Technology

Bachelor of Science in Computer Science

Kakamega, Kenya

Sep. 2021 – Dec 2025

EXPERIENCE

Backend developer intern

Adamur

May 2024 – July 2024

Nairobi, Kenya

- Developed and maintained a web application using Python, Django, and Django REST Framework to manage user projects and milestones
- Integrated third-party services such as GitHub (collaboration), Paystack (payments), and Slack (communication)
- Designed and implemented an invite system, increasing user acquisition and platform engagement.
- Built an email notification system improving user communication and engagement.
- Integrated OpenAI APIs to automate project milestone generation from textual descriptions.
- Built and documented RESTful API endpoints consumed by the frontend application.

PROJECTS

FgTrailers(client project)-Trailer rental management | *Python, Django, PostgreSQL, Redis, Docker, React, NextJs*

Oct 2025 – Ongoing

- Developed a REST API with JWT-based authentication to manage users, contracts, and signing workflows.
- Integrated DocuSeal for contract creation, signing, and tracking of signing status
- Generated dynamic PDFs using WeasyPrint for contracts and related documents
- Implemented Celery and Redis for background tasks such as email delivery and document generation.
- Integrated n8n to trigger and manage email workflows based on system events
- Built a Next.js frontend that consumes the API, handles authentication, and guides users through multi-step contract flows
- Containerized the application with Docker to standardize development and deployment environments

Smart biodigester Platform | *Supabase, Next.js*

May 2025 – June 2025

- Built a frontend dashboard using Next.js to display real-time biodigester metrics such as pH, pressure, and temperature
- Retrieved and rendered live sensor data stored in Supabase, enabling users to monitor system conditions remotely
- Implemented clean UI components for data visualization and alerts
- Collaborated with the and IoT team to align frontend data handling with incoming sensor payloads

RidesKe - Bodaboda verification system | *Go, PostgreSQL, Redis, Docker, Github Actions* Jan 2025 – Mar 2025

- Developed backend services in Go to manage rider registration, OTP-based verification, and document submission workflows
- Integrated SMS-based OTP system for secure user authentication during onboarding
- Used Redis for caching and managing short-lived data such as OTP codes
- Designed PostgreSQL schemas in Neon to store rider data, verification statuses, and document metadata
- Integrated Cloudinary for secure upload and retrieval of rider and customer profile photos
- Deployed the backend on Heroku using Docker and set up GitHub Actions for CI/CD to automate and deployment pipelines
- Collaborated with the Android team to align API structure and verification logic with the mobile frontend

TECHNICAL SKILLS

Languages: Python, Go, SQL (Postgres), JavaScript, Typescript, HTML/CSS

Frameworks: React, Next.js, Flask, Django, Django Rest Framework

Developer Tools: Git, Docker, Github, Postman, NeoVim
